

Below you can find the resources I went through to read more about `<meta>` tag and problems related to relying only on the tag to enable browser caching:

- [How to set HTTP headers for cache control](#)
- [How do we control web page caching across all browsers](#)
- [Is there a meta tag to turn off caching in all browsers](#)
- [HTML Spec: Pragma directives](#)
- [Industry-wide misunderstandings of HTTPS](#) (not covered during recording)
